10/04

Sous réserve de modifications

- Limiter le nombre d'ouvertures de la porte et, en tout état de cause, ne pas laisser ouverte trop longtemps pour éviter une remontée en température du réfrigérateur.
- Disposer les aliments de telle sorte que l'air puisse circuler librement tout autour.

Il convient de vérifier régulièrement que la température, notamment celle de la zone la plus froide, est correcte et le cas chéant, d'ajuster le thermostat en conséquence comme indiqué (page "UTILISATION").

La mesure de la température dans un zone (sur une clayette, par exemple) peut se faire au moyen d'un thermomètre placé, dès le départ, dans un récipient rempli d'eau (verre). Pour avoir une représentation fidèle de la réalité, lisez la température sans manipulation des commandes ni ouverte de porte.

Respect des règles d'hygiène

- Nettoyez fréquemment l'intérieur du réfrigérateur en utilisant un produit d'entretien doux sans effet oxydant sur les parties métalliques, puis rincer avec de l'eau additionnée de jus de citron, de vinaigre blanc ou avec tout produit désinfectant adapté au réfrigérateur.
- Retirez les suremballages du commerce avant de placer les aliments dans le réfrigérateur (par exemple suremballages des packs de yaourts).
- Couvrez les aliments.
- Consultez la notice d'utilisation de l'appareil en toutes circonstances et en particulier pour les conseils d'entretien.

Installation

- Assurez-vous, après avoir installé l'appareil, que celui-ci ne repose pas sur le câble d'alimentation.
- Important:** en cas de dommage du câble d'alimentation, il ne doit être remplacé que par un professionnel qualifié.
- L'appareil se réchauffe sensiblement au niveau du condenseur et du compresseur. Veillez à ce que l'air circule librement tout autour de l'appareil. Une ventilation insuffisante entraînerait un mauvais fonctionnement et des dommages sur l'appareil.
- Suivez les instructions données pour l'installation.
- Après la livraison, attendez 2 heures avant de brancher l'appareil pour que le circuit frigorifique soit stabilisé.
- Cet appareil est lourd. Faites attention lors de son déplacement.

Veuillez lire attentivement ces remarques avant d'installer et d'utiliser votre appareil. Nous vous remercions de votre attention.

Dear customer,

Before placing your new refrigerator/freezer into operation please read these operating instructions carefully. They contain important information for safe use, for installation and for care of the appliance.

Please keep these operating instructions for future reference. Pass them on to possible new owners of the appliance.

These operating instructions are for use with several technically comparable models with varying accessories. Please observe the notes which apply to your model.

Notes which are important for your safety or for the proper functioning of the appliance are stressed with a warning triangle and/or with signal words (Warning!, Caution!, Attention!). Please observe the following carefully.

Supplementary information regarding operation and practical applications of the appliance appear after this symbol.

Tips and notes concerning economical and environmentally sound use of the appliance are marked with the flower.

The operating instructions contain instructions for the correction of possible malfunctions by the user in the section "What to do if ...". If these instructions should not be sufficient, our customer service department is always available to you.

Printed on paper manufactured with environmentally sound processes.

- Débranchez toujours la prise de courant avant de procéder au nettoyage intérieur et extérieur de l'appareil et au remplacement de la lampe d'éclairage (pour les modèles qui en sont équipés).

- Ne faites pas fonctionner d'appareils électriques (par exemple : sorbetières électriques, mélangeurs,...) à l'intérieur de l'appareil.

Stockage des denrées dans les réfrigérateurs et règles d'hygiène

La consommation croissante de plats préparés et d'autres aliments fragiles, sensibles en particulier au non-respect de la chaîne de froid (1), rend nécessaire une meilleure maîtrise de la température de transport et de stockage de ces produits.

A la maison, le bon usage du réfrigérateur et le respect de règles rigoureuses contribuent de façon significative et efficace à l'amélioration de la conservation des aliments.

Conservation des aliments/Maîtrise des températures

- Stockez les aliments selon leur nature dans la zone appropriée:

Zone tempérée: Boissons œufs, beurre, sauces industrielles et préparées, fromages à pâtes cuite, fruits et légumes frais.

Zone fraîche: Produits laitiers, desserts lactés, matières grasses, fromages frais.

Zone la plus froide: Viandes, volailles, poissons, charcuteries, plats préparé, salades composées, préparations et pâtisseries à base d'œufs ou de crème, pâtes fraîches, pâte à tarte, pizza/quiches, produits frais et fromages au lait cru, légumes prêts à l'emploi vendus sous sachet plastique et plus généralement,tout produits frais dont la date limite de consommation (DLC) est associée à une température de conservation inférieure ou égale à +4°C.

L'observation des conseils suivantes est de nature à éviter la contamination croisée et à prévenir une mauvaise conservation des aliments.

- Emaller systématiquement les produits pour éviter que les denrées ne se contaminent mutuellement.
- Se laver les mains avant de toucher les aliments et plusieurs fois pendant la préparation du repas si celle-ci implique des manipulations successives de produits différents, et après, bien sûr, au moment de passer à table comme les règles d'hygiène l'imposent.
- Ne pas réutiliser des ustensiles ayant déjà servi (cuillère en bois, planche à découper sans les avoir bien nettoyés au préalable).
- Attendre le refroidissement complet des préparations avant de les stocker (ex : soupe).

⚠️ Avertissements importants

Ces avertissements ont été rédigés pour votre sécurité et celle d'autrui

Utilisation

- Cet appareil a été conçu pour être utilisé par des adultes. Veillez à ce que les enfants n'y touchent pas et ne l'utilisent pas comme un jouet.
- A la réception de l'appareil, déballez-le ou faites-le déballer immédiatement. Vérifiez son aspect général. Faites les éventuelles réserves par écrit sur le bon de livraison dont vous garderez un exemplaire.
- Votre appareil est destiné à un usage domestique normal. Ne l'utilisez pas à des fins commerciales ou industrielles ou pour d'autres buts que celui pour lequel il a été conçu.
- Ne modifiez pas ou n'essayez pas de modifier les caractéristiques de cet appareil. Cela représenterait un danger pour vous.
- Ne touchez pas avec les mains humides les surfaces givrées et les produits congelés et ne consommez pas certains produits tels que les bâtonnets glacés dès leur sortie de l'appareil ; la température très basse à laquelle ils se trouvent peut provoquer des brûlures ou un arrachement de la peau.
- Les réfrigérateurs et / ou congélateurs ménagers sont destinés uniquement à la conservation et/ou congélation des aliments.
- Si la température ambiante est inférieure ou égale à 10°C, les performances du compartiment congélateur ne seront plus assurées. Ceci est aussi valable lorsque l'interrupteur de température ambiante est basculé (si votre appareil en est équipé).
- Un produit décongelé ne doit jamais être recongelé.
- Suivez les indications du fabricant pour la conservation et/ou congélation des aliments.
- Dans tous les appareils de réfrigération et congélation certaines surfaces peuvent se couvrir de givre. Suivant le modèle, ce givre peut être éliminé automatiquement (dégivrage automatique) ou bien manuellement.
- N'essayez jamais d'enlever le givre avec un objet métallique, vous risqueriez d'endommager irrémédiablement l'évaporateur rendant du même coup l'appareil inutilisable. N'employez pour cela qu'une spatule en plastique.
- Ne décollez pas les bacs à glaçons avec un couteau ou tout autre objet tranchant.
- Ne placez ni bouteilles ni boîtes de boissons gazeuses dans le congélateur/compartiment basse température, elles pourraient éclater.

⚠️ Safety

The safety aspects of our refrigerators/freezers comply with accepted technical standards and the German Appliance Safety Law. Nevertheless, we consider it our obligation to make you aware of the following safety information:

Intended use

- The refrigerator is intended for use in the home. It is suitable for the cooling of food. If the appliance is used for purposes other than those intended or used incorrectly, no liability can be accepted by the manufacturer for any damage that may be caused.
- Alterations or changes to the freezer are not permitted for reasons of safety.
- If you use the refrigerator in a commercial application or for purposes other than the cooling of foods, please observe all valid legal regulations for your application.

Prior to initial start-up

- Check the refrigerator for transport damage. Under no circumstance should a damaged appliance be plugged in! In the event of damage, please contact the vendor.

Refrigerant

The refrigerant isobutane (R600a) is contained within the refrigerant circuit of the appliance, a natural gas with a high level of environmental compatibility, which is nevertheless flammable.

- During transportation and installation of the appliance, be certain that none of the components of the refrigerant circuit become damaged.
- If the refrigerant circuit should become damaged:
 - avoid open flames and sources of ignition;
 - thoroughly ventilate the room in which the appliance is situated.

Safety of children

- Packaging (e.g. wraps, polystyrene) can be dangerous for children. There is a risk of suffocation! Keep packaging material away from children!
- Please make old appliances unusable prior to disposal. Pull out the mains plug, cut off the mains cable, break or remove spring or boltcatches, if fitted. By doing this you ensure that children cannot lock themselves in the

fridge when playing (there is risk of suffocation!) or get themselves into other dangerous situations.

- Often children cannot recognise the hazards present in household appliances. It is therefore important that you ensure adequate supervision and never let children play with the appliance!

Daily Operation

- Containers with flammable gases or liquids can leak at low temperatures. There is a risk of an explosion! Do not store any containers with flammable materials such as, for example, spray cans, fire extinguisher refill cartridges etc in the refrigerator/freezer.
- Do not operate any electrical appliances in the refrigerator/freezer (e.g. electric ice cream makers, mixers etc.).
- Before cleaning the appliance, always switch off the appliance and unplug it, or pull the house fuse or switch off the circuit breaker.
- When unplugging always pull the plug from the mains socket, do not pull on the cable.

In case of malfunction

- If the a malfunction occurs on the appliance, please look first in the "What to do if ..." section of these instructions. If the information given there does not help, please do not perform any further repairs yourself.
- Refrigerators/freezers may only be repaired by qualified service engineers. Improper repairs can give rise to significant hazards. If your appliance needs repairing, please contact your specialist dealer or our Customer Service.

Disposal

Appliance Packaging Information

All materials are environmentally sound! They can be dumped or burned at an incinerating plant without danger!

About the materials: The plastics can be recycled and are identified as follows:

>PE< for polyethylene, e.g. the outer covering and the bags in the interior.

>PS< for polystyrene foam, e.g. the pads, which are all free of chlorofluorocarbon.

The carton parts are made from recycled paper and should be disposed of at a waste-paper recycling collection location.

Chère Cliente, Cher Client

Conservez cette notice d'utilisation avec votre appareil. Si l'appareil devait être vendu ou cédé à une autre personne, assurez-vous que la notice d'utilisation l'accompagne. Le nouvel utilisateur pourra alors être informé du fonctionnement de celui-ci et des avertissements s'y rapportant.

Ce mode d'emploi s'applique à plusieurs modèles technique comparables, qui diffèrent par leur équipement. Observez uniquement les indications qui correspondent à votre modèle.

Indications de sécurité

Conseils et recommandations

Informations liées à la protection de l'environnement

La notice d'utilisation contient des indications qui permettent de remédier soi-même à d'éventuels dérangements. Voir "En cas d'anomalie de fonctionnement". Si ces indications ne suffisent pas, consultez le service après vente de votre magasin vendeur.

Disposal of old Appliances

For environmental reasons, refrigeration appliances must be disposed of properly. This applies to your old appliance, and - at the end of its service life - for your new appliance as well.

Warning! Before disposing of old appliances make them inoperable. Remove plug from mains, sever the power cable, remove or destroy any snap or latch closures. This eliminates the danger that playing children lock themselves into the appliance (danger of suffocation!) or place themselves into other life-endangering situations.

Disposal:

- The appliance may not be disposed of with domestic waste or bulky refuse.
- The refrigerant circuit, especially the heat exchanger at the back of the appliance, may not be damaged.
- Information concerning collection schedules or locations can be obtained from the local disposal authorities or town hall.

Remove transport safeguard

The appliance and the interior fittings are protected for transport.

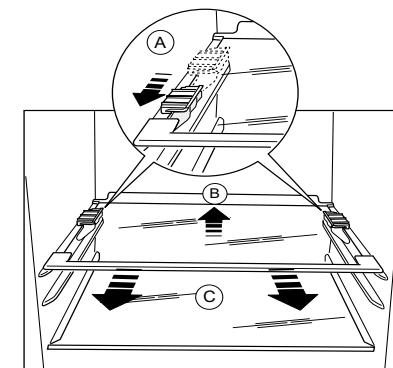

- Pull off the adhesive tape on the left and right side of the door.
- Remove all adhesive tape and packing pieces from the interior of the appliance.

Shelf holders

Your appliance is equipped with shelf retainers that make it possible to secure the shelves during transportation.

To remove them proceed as follows:

Move the shelf retainers in the direction of the arrow, raise the shelf from the rear and push it forward until it is freed and remove the retainers.

Imprimé sur du papier protégeant l'environnement

il ne suffit pas de penser écologique il faut agir en conséquence ...

Installation

Installation Location

The appliance should be set up in a well ventilated, dry room.

Energy use is affected by the ambient temperature. The appliance should therefore

- not be exposed to direct sunlight;
- not be installed next to radiators, cookers or other sources of heat;
- only be installed at a location whose ambient temperature corresponds to the climate classification, for which the appliance is designed.

The climate classification can be found on the serial plate, which is located at the left on the inside of the appliance.

The following table shows which ambient temperature is correct for each climate classification: each climate classification:

Climate classification	for an ambient temperature of
SN	+10 bis +32 °C
N	+16 bis +32 °C
ST	+18 bis +38 °C
T	+18 bis +43 °C

If installation next to a source of heat is unavoidable, the following minimum clearances must be maintained at the sides of the appliance:

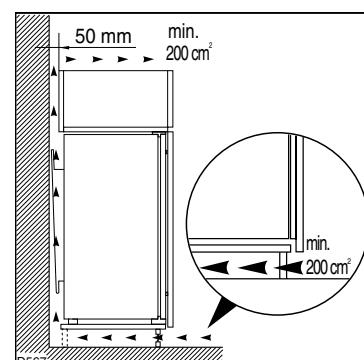

- for electric cookers 3 cm;
- for oil and coal fired ranges 30 cm.

If these clearances cannot be maintained a heat insulating pad is required between the cooker and the refrigeration appliance.

Your appliance needs air

For safety reasons, minimum ventilation must be as shown Fig.

Attention: keep ventilation openings clear of obstruction;

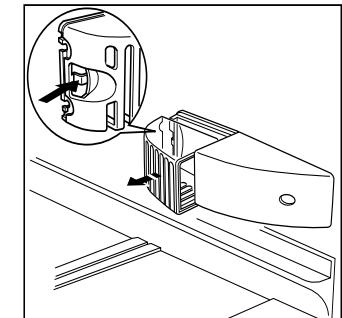

Changing the light bulb

Warning! There is a risk of electric shocks! Before changing the light bulb, switch off the appliance and unplug it, or pull the fuse or the circuit breaker.

Light bulb data: 220-240 V, max. 15 W

1. Unplug the mains plug.
2. To change the light bulb press on the rear hook and at the same time slide the cover in the direction indicated by the arrow.
3. Change the defective light bulb.
4. Refit the light bulb cover.
5. Put the refrigerator back into operation.

Regulations, Standards, Guidelines

This appliance was designed for household use and was manufactured in accordance with the appropriate standards. The necessary measures in accordance with appliance safety legislation regulations (GSG), accident prevention regulations for refrigeration appliances (VBG 20) and the regulations of the German Society of Electrical Engineers (VDE) were observed in the manufacture of this appliance.

 The refrigerant circuit has been checked for leaks.

This appliance is in accordance with the following EU guidelines:

- 73/23/EWG dated 19 February 1973 - low voltage guidelines.
- 89/336/EWG dated 3 May 1989

(including guideline change notice 92/31/EWG) - EMV guideline

Malfunction	Possible Cause	Remedy
The food is too warm.	Temperature is not properly adjusted.	Please look in the "Initial Start Up" section.
	Door was open for an extended period.	Open the door only as long as necessary.
	A large quantity of warm food was placed in the appliance within the last 24 hours.	Turn the temperature regulator to a colder setting temporarily.
	The appliance is near a heat source.	Please look in the "Installation location" section.
Interior lighting does not work.	Light bulb is defective.	Please look in the "Changing the Light Bulb" section.
Heavy build up of frost, possibly also on the door seal.	Door seal is not air tight (possibly after changing over the hinges).	Carefully warm the leaking sections of the door seal with a hair dryer (not hotter than approx. 50 °C). At the same time shape the warmed door seal by hand such that it sits correctly.
Unusual noises.	Appliance is not level.	Readjust the feet.
	The appliance is touching the wall or other objects.	Move the appliance slightly.
	A component, e.g. a pipe, on the rear of the appliance is touching another part of the appliance or the wall.	If necessary, carefully bend the component out of the way.
The compressor does not start immediately after changing the temperature setting.	This is normal, no error has occurred.	The compressor starts after a period of time.
Water on the floor or on storage shelves.	Water drain hole is blocked.	See the "Cleaning and Care" section.

Rehingeing the door

The appliance's door has been locked in position for transport by means of pins on both sides. According to the door opening direction, remove relevant pins at the top and at the bottom.

 **Warning!** When changing the side at which the door opens, the appliance may not be connected to the mains. Remove plug from the mains beforehand.

Housing dimensions

Height	1780mm
Depth	550 mm
Width	560 mm

Electrical connection

Before initial start-up, refer to the appliance rating plate to ascertain if supply voltage and current values correspond with those of the mains at the installation location.

e.g.: AC 220 ... 240 V 50 Hz or
220 ... 240 V~ 50 Hz

(i.e. 220 to 240 volts alternating current, 50 Hertz)

The rating plate is inside the appliance on the left.

A correctly installed, earthed socket is required for the electrical supply. The supply must have a fuse rating of at least 10 Amps.

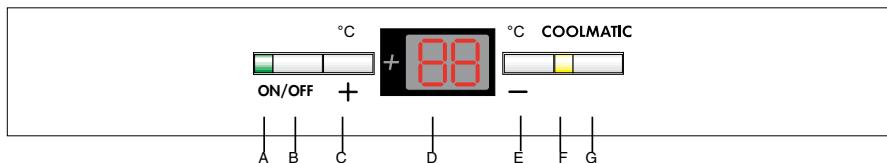

If the socket is not accessible once the appliance is built in, the electrical installation must include suitable means of isolating the appliance from the mains (e.g. fuse, cut-out, current trip or similar with a minimum contact separation of 3 mm).

Attention: The mains connection cable may only be replaced by a skilled electrician. Please contact your dealer or our customer service department for repairs.

Prior to Initial Start-Up

- Please clean the appliance interior and all accessories prior to initial start-up (see section: "Cleaning and Care").

Operating and indicator panel

- A. Mains pilot indicator (green)
- B. Fridge button ON/OFF
- C. Temperature setting button (for warmer temperatures)
- D. Temperature display
- E. Temperature setting button (for colder temperatures)
- F. COOLMATIC function "on" indicator (yellow)
- G. COOLMATIC button

Temperature setting buttons

The temperature is adjusted using the „C“ (+) and „E“ (-) buttons. These buttons are connected to the temperature display.

- The temperature display is switched over from the display of the ACTUAL temperature (Temperature display is illuminated) to the display of the DESIRED temperature (Temperature display flashes) by pressing one of the two buttons, „C“ (+) or „E“ (-).
- Each time one of the two buttons is pressed again the DESIRED temperature is adjusted by 1 °C. The DESIRED temperature must be reached within 24 hours.

If neither button is pressed, the temperature display automatically switches back after a short period (approx. 5 sec.) to the display of the ACTUAL temperature.

DESIRED temperature means:

The temperature that has been selected for inside the fridge. The DESIRED temperature is indicated by flashing numbers.

ACTUAL temperature means:

The temperature display indicates the current temperature inside the fridge. The ACTUAL temperature is indicated with illuminated numbers.

Energy Saving Tips

- Do not install the appliance near cookers, radiators or other sources of warmth. High ambient temperatures cause longer, more frequent operation of the compressor.
- Ensure sufficient air circulation and exhaust at the appliance base and at the back wall of the appliance. Never cover air vent openings.
- Do not place warm foods into the appliance. Allow warm foods to cool first.
- Only leave door open as long as necessary.
- Do not set temperature any colder than necessary.
- Keep the heat emitting condenser, the metall grille on the rear wall of your appliance, always clean.

What to do if ...

Correcting Malfunctions

A malfunction may be caused by only a minor fault that you can rectify yourself using the following instructions. Do not perform any other work on the appliance if the following information does not provide assistance in your specific case.

Warning! Repairs to refrigerators/freezers may only be performed by qualified service engineers. Improper repairs can give rise to significant hazards for the user. If your appliance needs repairing, please contact your specialist dealer or our Customer Service.

Malfunction	Possible Cause	Remedy
Appliance does not work.	Appliance is not switched on Mains plug is not plugged in or is loose.	Switch on the appliance. Insert mains plug.
	Fuse has blown or is defective.	Check fuse, replace if necessary.
	Socket is defective.	Mains malfunctions are to be corrected by an electrician.
Appliance cools too much.	Temperature is set too cold.	Turn the temperature regulator to a warmer setting temporarily..

Cleaning and Care

For hygienic reasons the appliance interior, including interior accessories, should be cleaned regularly.

Warning!

- The appliance may not be connected to the mains during cleaning. Danger of electrical shock! Before cleaning switch the appliance off and remove the plug from the mains, or switch off or turn out the circuit breaker or fuse.
- Never clean the appliance with a steam cleaner. Moisture could accumulate in electrical components, danger of electrical shock! Hot vapours can lead to the damage of plastic parts.
- The appliance must be dry before it is placed back into service.

Attention!

- Ethereal oils and organic solvents can attack plastic parts, e.g.
 - lemon juice or the juice from orange peals;
 - butyric acid;
 - cleansers which contain acetic acid.

Do not allow such substances to come into contact with appliance parts.

- Do not use any abrasive cleansers.

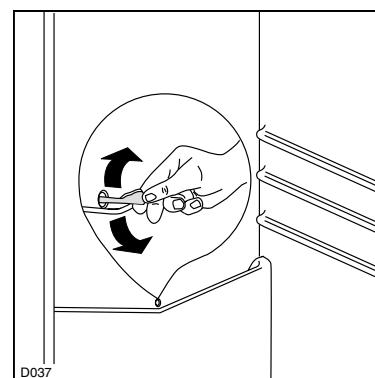

1. Remove frozen food and the food from the refrigerator. Wrap frozen food in several layers of newspaper. Store it in a cool place, well covered.
2. Switch the appliance off and remove the plug from the mains, or switch off or turn out the circuit breaker or fuse.
3. Clean the appliance and the interior accessories with a cloth and lukewarm water. Commercially available dish washing detergents may also be used.
4. After cleaning wipe with fresh water and rub dry.

Accumulation of dust at the condenser increases energy consumption.

For this reason carefully clean the condenser at the back of the appliance once a year with a soft brush or a vacuum cleaner.

5. Check the water drain hole on the rear wall of the fridge. Clear a blocked drain hole with the aid of the green peg in the pack of accessories included with the appliance.
6. After everything is dry place appliance back into service.

Temperature display

The temperature display can indicate several pieces of information.

- During normal operation, the temperature currently present in the fridge (ACTUAL temperature) is displayed.
- When the temperature is being adjusted a flashing display indicates the fridge temperature currently set (DESIRED temperature).

Starting Up – Setting the Temperature

1. Plug the mains plug into the mains socket.
2. If the display is OFF press ON/OFF button. The green mains pilot indicator illuminates. The appliances start.
3. Press either the „C“ (+) or „E“ (-) button. The temperature display switches over and the DESIRED temperature currently set flashes on the temperature display.
4. Set the required temperature by pressing the „C“ (+) or „E“ (-) buttons (see section "Temperature setting buttons"). The temperature display will immediately show the changed setting. Each time the button is pressed the temperature is adjusted by 1 °C.

From a food safety point of view +5 °C should be considered sufficiently cold for storing food in the fridge.

5. Once the required temperature has been set, after a short period (approx. 5 sec.) the temperature display will change and again indicate the current ACTUAL temperature inside the fridge. The display will change from flashing to continuous illumination.

Information! When the setting is changed, the compressor does not start immediately if automatic defrosting is currently taking place. As the storage temperature within the fridge is reached quickly you can store food immediately after switching on.

COOLMATIC

The COOLMATIC function is suited for quick cooling of large quantities of goods in the refrigerator.

1. The COOLMATIC function is switched on by pressing the COOLMATIC button. The yellow light illuminates.
The COOLMATIC function now provides for intensive cooling. The COOLMATIC function is ended automatically after a period of 6 hours.
2. The COOLMATIC function can be ended manually at any time by pressing the COOLMATIC button again. The yellow light goes out.

Holiday function

The holiday function sets the temperature at +15°C. This function allows you to keep the refrigerator shut and empty during a long holiday period (e.g. the summer holidays) without the formation of a bad smell.

1. To turn on the holiday function, press button (C).
2. Press several time button (C) until the letter "H" (Holiday) appears on the temperature indicator. Now the refrigerator is in the "holiday" function in the energy-saving mode.

The fridge compartment must be empty with holiday function on.

Interior Accessories

Storage Shelves

The glass shelf above the fruit and vegetable compartment should always remain in position, to ensure fruit and vegetables stay fresh longer.

The remaining storage shelves can be adjusted to various heights:

Pull the storage shelf forward until it can be tipped up or down and removed.

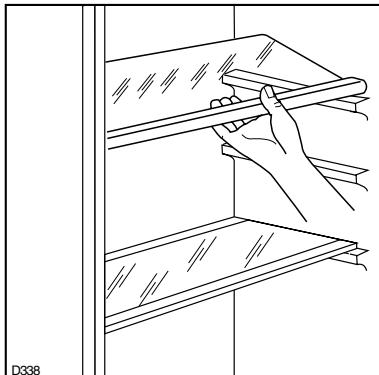

To insert at a different height use the same procedure in reverse.

Adjustment for tall goods:

Remove the front half of the two-part vario glass storage shelf and insert it at a different level. Space is thus gained for storage of tall goods on the underlying storage shelf.

Variable Inner Door

The door compartments can be pulled up and removed, and inserted at other positions as needed.

Fresh food refrigeration

To obtain the best performance:

- do not store warm food or evaporating liquide in the refrigerator
- do cover or wrap the food, particularly if it has a strong flavour.
- Position food so that air can circuate freely round it.

Useful hints:

Meat (all types): wrap in polythene bags and place on the glass shelf above the vegetable drawer(s) **For safety, store in this way only one or two days at the most.**

Cooked foods, cold dishes, etc: these should be covered and may be placed on any shelf.

Fruit and vegetables: these should be thoroughly cleaned and placed in the special drawer(s) provided.

Butter and cheese: these should be placed in special airtight containers or wrapped in aluminium foil or polythene bags to exclude as much air as possible.

Milk bottles: these should have a cap and should be stored in the bottle rack on the door.

Bananas, potatoes, onions and garlic, if not packed, must not be kept in the refrigerator.

Drefrosting

Refrigerator

Frost is automatically eliminated from the evaporator of the refrigerator compartment every time the motor compressor stops, during normal use. The defrost water drains out through a trough into a special container at the back of the appliance, over the motor compressor, where it evaporates.

Switching off the appliance

To switch off, hold down the ON/OFF button for approx. 3 seconds. This will result in a countdown from "3" to "1" taking place in the temperature display. On reaching "1" the fridge will switch off. The temperature display will go off.

If the appliance is not going to be used for an extended period:

1. Remove all refrigerated and deep-frozen packages as well as ice trays.
2. Switch off the appliance, holding down the ON/OFF button until the display goes off (see above).
3. Remove the mains plug or switch off or turn out the circuit breaker or fuse.
4. Leave the door open to avoid the build up of odours.
